The two sides of the coin - Integrating client side and server side

---

The aim of this project is to make use of HTML, CSS and Java Script, but mainly the Java Script. To do that we going to make a simple todo list making request for a PHP server, bank end. We utilized Angular 5 to perform this task.

How to

- Client side
    - Open a terminal
    - Deflate the zipped file
    - Enter where the code was deflated
    - Make sure to have all installed dependencies

```
npm install
```

- Start the server with

```
ng start
```

- Open your prefered browser

  - Open http://localhost:3000

- Server side

  - Move all file from back folder to server, could be a apache/IIS/NGINX
  - Depending of your server configure it (IIS needs to create a site to do that, apache you have to move the src within htdocs)
  - Start your server
